

Matthew Fainman

Senior Full-Stack Engineer

Amsterdam, NL · +31 6 42 90 25 33 · matthewfainman@gmail.com · [GitHub](#) · [LinkedIn](#)

PROFILE

Senior full-stack engineer focused on building well-structured, maintainable applications that solve real customer problems. My work has involved close collaboration with product, sales, and operations teams in fast-moving environments, and I care more about understanding customer problems end to end than simply closing tickets. I use modern tooling, including AI, to ship quickly without compromising quality, and I do my best work on teams where engineers help shape the product and are trusted with meaningful responsibility.

SKILLS

TypeScript · React · Node.js · Fastify · Next.js · TanStack · PostgreSQL · ClickHouse · GCP · Terraform · Docker · CI/CD

EXPERIENCE

Senior Full-Stack Engineer

Sep 2025 – Present

Churned · Amsterdam

- Consolidated four services (dashboard SPA, Fastify API, two Cloud Run workers) into a single Turborepo monorepo with shared TS/ESLint configs and path-filtered CI; wired the full GCP delivery pipeline end-to-end — GitHub Actions → Firebase Hosting for the frontend, Cloud Build → Terraform → Cloud Run for the backends, with dev/acceptance/main mapped to environments
- Shifted a meaningful share of my output from implementation to creating documentation, coding conventions, and scaffolding — per-app CLAUDE.md files, reusable skills, slash commands, and review subagents — enabling Claude Code to handle routine implementation reliably while I focus on architecture, review, and judgment-heavy work
- Led complex UI work in React 19 and TanStack, including a workflow builder that turns churn predictions into automated actions across client integrations, and an audience-filter UI powered by a custom serialisable filter DSL, ARIA-compliant grouping, and a query-key factory that keeps cache state consistent
- Instrumented the dashboard with PostHog funnels and event definitions on workflow and audience screens, so UI/UX decisions are no longer based on intuition alone and subsequent fixes are grounded in real customer-friction data
- Built a customer-filter regression suite that captures production filter trees and asserts row-for-row equivalence between the Postgres and ClickHouse query-compilation paths, de-risking the ClickHouse migration

Full-Stack Developer

Jul 2024 – Aug 2025

Quatt · Amsterdam

- Built a customer-facing quoting tool that estimates savings and recommends heat pump configurations based on user inputs — end-to-end, from UI to data model and pricing logic
- Rebuilt the company's internal sales platform, streamlining rep workflows and improving lead-to-conversion visibility across the funnel
- Integrated with and extended HubSpot CRM; built internal tooling used daily by Marketing, Sales, Operations, and Product teams
- Managed Docker-based deployments and infrastructure-as-code with Pulumi; automated workflows via GitHub Actions
- Delivered full-stack features in Next.js, Node.js, TypeScript, and Tailwind CSS; standardised shared code and tooling with Turborepo

Full-Stack Developer

Mar 2023 – Jun 2024

Predictive Insights · Johannesburg

- Led end-to-end development of a web application delivering predictive modelling insights to enterprise clients
- Built complex data visualisations using D3.js, React, and Tailwind for clear analytical storytelling across large datasets

- Managed cloud infrastructure using AWS CDK, Lambda, and S3; implemented full IaC and CI/CD pipelines
- Spearheaded the company's shift from consultancy services to a product model, standardising architecture and DevOps workflows to support scale
- Contributed to product strategy and roadmap, aligning technical implementation with business goals
- Stack: React, TypeScript, AWS CDK, Lambda, S3, DuckDB, Tailwind, D3.js

Intermediate Developer → Senior Developer

Jul 2021 – Feb 2023

SovTech · Johannesburg

- Led architecture and DevOps setup for a greenfield commercial hiring platform; designed CI/CD pipelines, Docker infrastructure, and automated deployment workflows
- Built dynamic web apps using Remix, PostgreSQL, GraphQL, and serverless AWS services (Cognito, Lambda); deployed to Fly.io for cost efficiency
- Delivered full-stack client solutions across multiple stacks (React, Node.js, Expo) under tight constraints
- Mentored junior developers; awarded annual company prize for highest potential and growth toward a Technical Lead role

Junior Software Developer

Jul 2020 – Jun 2021

SovTech · Johannesburg

- Contributed to client projects by developing and maintaining frontend and backend features across multiple industry domains
- Gained hands-on experience with React, Node.js, and GraphQL while collaborating with senior developers to deliver clean, maintainable code

PROJECTS

QuackDB — Open-source browser-based SQL editor for DuckDB, built with Monaco Editor. quackdb.com

EDUCATION

BCom Honours in Economics

2015 – 2019

University of Cape Town · Cape Town

DETAILS

Citizenship / work authorisation: EU · **Location:** Amsterdam, Netherlands · **Languages:** English (native)
